

**Realization of V4 Small Grants projects in Oroszlány region,  
Mining Museum of Oroszlány**

**Mr István KARDICS certified mining engineer**

Mining memorial places and works of art related to mining constitute the stations of the mining road in Oroszlány. These can be seen on the map of the mining road, and the photos of which can also be open for public inspection on the homepage of the project.

**The Mining Museum of Oroszlány**

The Mining Museum of Oroszlány can be found in the outskirts of the city, on the Majk plant territory of the Mining Works No. XX.

The Museum was established in one part of the plant territory and in a building near to the elevating shaft and mining car sending station during closing the mining plant in 2000. Here mechanical equipments and mining memorial objects characteristic of Oroszlány Coal Basin are located.

The collection found in the building truly illustrates the history of coal mining in Oroszlány started in 1937; the minerals characteristic of Vértes Mountain; the tools and instruments of geologists and mine surveyors.

Outside the building tunnel driving machines of various types; excavators; excavating mobile supporting systems; and transporting devices can be seen. In an underground tunnel part excavating and supporting equipments of a long-wall mining working place can be visited.
